- Safe operation
- Robust design
- Used for measuring application
- Wide application e.g. elevator industries, motor control, automation, machineries etc
- Optimum performance
- Choice of multiposition/multiple circuits
- Voltage between phases & each phase & Neutral with OFF

✓ **Neutral is with early make – late break**

General Characteristics:

It's a manual cam operated control switch assembled on packet principle with wide application in electrical, electronics & instrumentation equipments. It is available with three packets. Plastic Cam is used for making breaking depending upon contact sequence. The Cam, which closes and opens the contacts, has rotary movement to multiple positions, thereby multiple Circuit functions can be controlled. It is suitable for AC switching applications. The shorting links assembled in the rotary cam switch are not to be removed to ensure proper functioning & sequencing of the Rotary Cam switch.

Construction:

Each packet has two sets of double break silver nickel contact for effective making & breaking. Packets are made from insulating material that can withstand mechanical & electrical stresses & have excellent electrical properties.

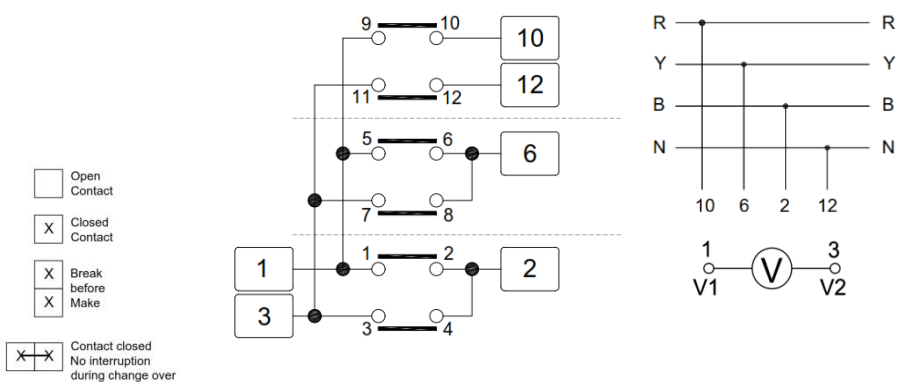

Switching angle: It is used to perform Make and Break operation in a sequential way by rotating the switch to different positions. Switching angle is 45°.

Mounting: Available in panel mounting version. Fixing centers are: 36X36 & 25X30

Warranty: 18/12 month from the date of supply/uses, whichever is earlier.
